

Environmental/Sustainability Statement

ST Tissue is committed to producing environmentally responsible paper products by utilizing manufacturing processes that minimize our impact on the environment and conserve our natural resources.

We use 100% recovered fiber that meets or exceeds the EPA requirement, for Post Consumer Content, in all of our towel and napkin products. The use of over 7000 tons of recycled fiber every month reduces the need for landfill space by over 250,000 cubic yards every year.

As part of our environmental stewardship, ST Tissue products have been verified by an independent third-party, Green Seal, for having met the requirements under Sanitary Paper Products GS-1.

Green Seal is an independent, non-profit organization dedicated to identifying, certifying and promoting environmentally responsible products with consideration for their entire life cycle. They provide a science-based environmental certification that assures that the paper produced by ST Tissue meets the highest degree of environmental excellence.
